

# DRAWER-FRONT STENCIL GUIDE

- A** = Circle diameter/drawer height  
**B** = Circle radius/offset between rows  
**C** = Circle-radius/half the drawer height

1. Measure and mark centered lines along the drawer width and height.
2. Place the drawer front on a piece of shelf liner large enough to cover the front and trace around the edges. Mark centered lines along the width and height of the tracing.
3. Adjust a compass to draw circles equal to the drawer height. Mark the first circle at the drawer center, followed by circles to the left and right so the edges touch.
4. Mark upper and lower circles offset from the center circles by half.
